# Legal Example: Rendered Global Session Type

Conversation excerpt

9 November 2026

**User**

render the global type for the legal example

**Assistant — progress**

I'll render the corrected global type with LeanFM, including the explicit resend continuation after the lost-letter history.

**Assistant — rendered global type**

The generated diagram is reproduced in a light theme on the next page. The interactive zoom controls are omitted from this static PDF.

Checked global type · Five roles · Alternative branches are enclosed in frames.

The postal branch includes a proposed later direct resend. The chapter's lost-letter history stops before that continuation; it remains unfinished.

**Source and provenance**

Prompt: "render the global type for the legal example".

Question: What interactions and choices does the corrected tenancy-deposit protocol admit?

Source: `book/generated/legal-session-inference/DepositHistories.leanfm`, inferred from chapter 12 with the stated recovery assumption.

Reducer: LeanFM `session_diagram`.

Unit: protocol events and branch structure, not elapsed time.

Boundary: one tenancy, including settlement, claim/reparation, postal recovery, and hardship alternatives. `session_check`: no issues. Normative judgments and deadlines are outside this diagram.

**Assistant**

Download the SVG · View the protocol source

Original file targets:

- `book/generated/legal-session-inference/global-type.svg`
- `book/generated/legal-session-inference/DepositHistories.leanfm`

**User**

create a pdf from "render the global type for the legal example" forward

**Assistant — progress**

I'll export that part of the conversation to PDF, including the rendered global type.

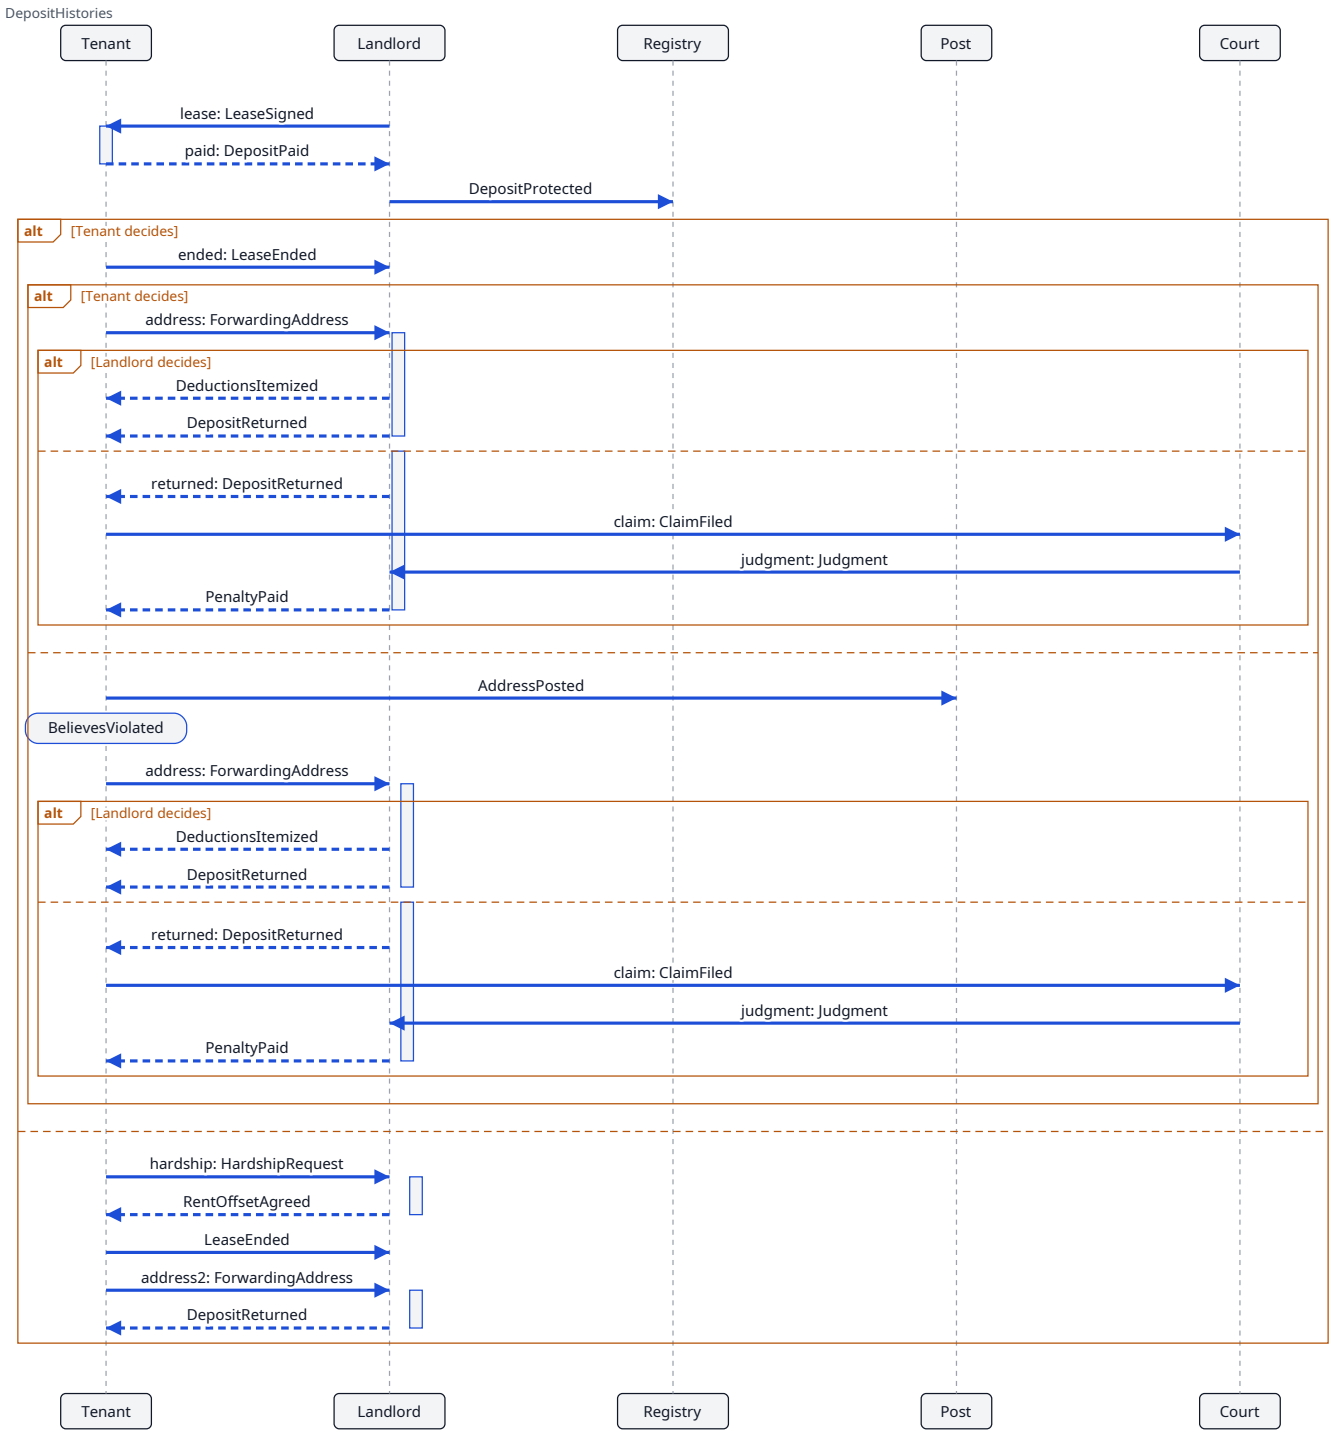

Figure 1: Corrected global session type for the legal example, generated by LeanFM.
